Patient downloads G6 app on their smart phone to view Dexcom G6 Pro Continuous Glucose Monitoring System (G6 Pro) readings.

**Healthcare professional:** Insert sensor (Section A) and attach transmitter (Section B). Complete sections C and D. Review this handout with patient, then give to them to take home.

### A. Insert Sensor

1. Gather materials: applicator, transmitter, and wipes.
2. Pick sensor site. Avoid bones, muscle, irritated skin, tattoos, areas that get bumped.
3. Clean sensor site with alcohol wipe.
4. Peel off adhesive backings.
5. Place adhesive on skin.
6. Fold and break off safety guard.
7. Press button to insert sensor.
8. Discard applicator. (follow local guidelines)

### B. Attach Transmitter

2. Insert transmitter, tab first, into holder.
3. Click transmitter into place, flush with holder.
4. Rub around patch 3 times.

### C. Information patient needs for G6 app setup

1. Patient enters alerts settings in app
   - Low Alert: 60 mg/dL–100 mg/dL
   - High Alert: 120 mg/dL–400 mg/dL
2. Patient enters transmitter SN in app.

**PUT STICKER HERE**
Don’t give transmitter SN to blinded patient

### D. Transmitter removal date

- In person
- Other ____________________

**Return transmitter**

- Date ____________________
- Time ____________________

### G6 Pro Overview

G6 Pro takes your glucose reading every 5 minutes for 10 days. After returning the system, your healthcare professional reviews your glucose history and may adjust your medication, diet, or exercise.

**What do I do?**
- Keep your smartphone within 20 ft
- Shower and swim as normal
- Return to your healthcare professional as instructed

**What don’t I do?**
- No MRI’s
- No full-body scanners
- No sunscreen or lotions on transmitter
- No system parts in mouth, it’s a choking hazard
- Don’t remove transmitter, it’ll end your sensor session

Continued on reverse
Can I make treatment decisions with G6 Pro?
Yes! Use your G6 Pro for treatment decisions unless:

Your readings do not match your symptoms
You don’t feel right, yet the G6 Pro says your glucose is OK and your trend arrow is straight.

No number or no arrow
On the home screen: you don’t have a number, don’t have an arrow, or both.

In both cases, use your blood glucose meter for treatment decisions.

Be careful!
When was my last dose?
Avoid taking insulin doses too close together (stacking insulin). Doing so could cause you to go low. Sometimes it’s best to watch and wait (at least two hours).

Need help?
Contact your healthcare professional:
For medical issues:
• G6 Pro gets loose or removed
• Sensor wire breaks off
• Irritation at insertion site

What’s Next?
Once your 10-day sensor session ends, follow the instructions below to remove the patch from your body. Return to your healthcare professional (see Section D). Sensor must be returned within 30 days of starting session.

1 Peel the entire patch off like a bandage.
2 Place in bag and seal it.
